

**TESTING**

Knapp Energy has teamed up with several testing facilities to provide targeted oil & fluid analysis programs and to provide efficient lubricant management benefits resulting in:

- *extended equipment life & oil change intervals*
- *reduced maintenance expense*
- *measurement of equipment wear trends*
- *verification of abnormal performance conditions*
- *reduced unscheduled downtime*
- *evaluation of lubricant condition*
- *support data for warranty claims*

Ana Laboratories...

Ana Labs analytical testing facilities, offers the latest technology in lubricant testing and reporting. Pre-paid test kits can be mailed directly with test results posted for web access only days after the samples are received.

To review some of the benefits Ana Labs can provide, please visit: www.analaboratories.com

Predictive Maintenance...

Predictive Maintenance Services is a full service laboratory. Their Quality System is ISO 9001:2008 registered.

They are an independently owned laboratory that tests lubricants, greases, water-based fluids, metalworking lubricants, water/glycol, Biodiesel, Diesel Fuels, Gasoline, coolants and antifreeze.

Trending and historical data are an extremely important part of an oil analysis program.

Using their independent laboratory means you won't lose your historical data because you switched from one provider to another. For more information on Predictive Maintenance, visit:

www.theoilab.com

Staveley Services...

Recognized as the industry leader, ALS Staveley Services Fluids Analysis has proudly provided independent oil, coolant, fuel, and metalworking testing services since 1961. As part of the ALS Laboratory Group, a global provider of quality testing services, ALS Staveley Services provides the quality laboratory services our customers have come to rely on.

They offer standard analysis packages and over 100 different specialized ASTM tests that cover any combination of conditions, fluids, and applications. With customers throughout the United States, Canada, and Mexico, ALS Staveley is the largest independent laboratory network in North America. For more information visit: www.staveleyfa.com

Wallover Oil...

To assure customers that their products are technically correct every time, they maintain a comprehensive in-house lab.

Their laboratory is outfitted with state-of-the-art instrumentation including gas chromatographs, FTIR, particle counter, x-ray, fluorescent analyzing, and a full complement of wet testing equipment. Their experienced team will analyze samples and make recommendations to optimize your lubricant and metalworking fluids program.
